

Workshop on Reporting Under the Directive on Urban Waste Water Treatment

On November 18, 2010 in the Headquarters of the European Commission, Brussels, was held a [workshop on Reporting Under the Directive on Urban Wastewater Treatment](#). ETC/W was responsible for putting together the workshop agenda, presentations and for the preparation of most of the accompanying documents.

The workshop was first summarized by a reporting exercise that has already been concluded, which took place at the turn of 2009-2010. It was noted that the quality of reported data, compared to reporting in 2007 had increased significantly. Then the proposal of new parameters for the upcoming reporting in 2011 was presented and briefly discussed. In connection with the new exercise was also introduced a new reporting and web-based application developed by experts from the ETC/W, which will help member states to fill in reporting templates and for the checking of their data quality. The web application represents a significant facilitation of accounting processes for both member states and for the ETC/W, which will continue to be responsible for checking the quality of reported data. The workshop also heard the first most composite feedback from the testing of the web applications selected by the member states.
